Readiness Assessment
IT Asset Management (ITAM)

Why Start Here?

Before investing in an ITAM initiative, enterprise organizations need visibility—into their assets, their gaps, and their opportunities. The Road Map ITAM Readiness Assessment delivers that clarity.

This structured, insight-driven engagement evaluates your current asset landscape—across infrastructure, tooling, governance, and operations—and provides an actionable foundation for building a strategic ITAM program that's scalable, compliant, and value-driven.

What is Delivered?

1. Full-Stack Asset Visibility

We assess your current technology landscape across on-prem, cloud, and virtual environments. This includes systems, software, hardware, and configuration relationships—building a real-world picture of your current IT asset footprint.

2. ITAM Capability Baseline

We establish a maturity benchmark across lifecycle management, governance, discovery tooling, and data integrity. This helps quantify your starting point and identify key areas for optimization.

3. Gaps, Risks, and Opportunity Mapping

We identify unmanaged assets, audit risks, and operational inefficiencies. Our advisors provide targeted recommendations across people, process, and platform dimensions—framed to business and compliance needs.

4. Roadmap-Ready Insights

You receive a stakeholder-ready findings report that aligns technical realities to strategic priorities. This is not a generic checklist—it's a tailored briefing to inform decision-making, budgeting, and roadmap development.

Our Readiness Assessment is ideal for organizations which are:

- Planning a strategic refresh of ITAM or CMDB platforms
- Facing challenges with audit readiness or asset visibility
- Merging or acquiring new entities with unclear infrastructure
- Seeking to align ITAM to security, finance, and operational outcomes
- Aiming to reduce software and cloud spend through real-time insights

Assessment Focus Areas

DIMENSION	KEY DISCOVERY POINTS
Asset Inventory	Are your current inventories complete, accurate, and dynamic?
Lifecycle Coverage	Is there visibility and governance from acquisition to disposal?
Tooling & Automation	Are you leveraging discovery, integration, and dependency mapping tools effectively?
Governance & Ownership	Are roles, policies, and accountability clearly defined and enforced?
Compliance Readiness	Can your asset data support licensing audits and regulatory reporting?
Data Quality & Integration	Does ITAM data align across ITSM, ERP, and cybersecurity tools?
Scalability & Coverage	Can your current ITAM approach scale across hybrid infrastructure and business units?

One solution to manage all your IT assets, wherever they are.

Full visibility into each of your IT Assets from a single solution will forever change your ability to visualize, manage, maintain and secure your infrastructure.
